

# AMOS National Radar Workshop

## From Research to Operations

New Horizons Building, Monash University, Clayton

12-14 November 2019

This year the annual radar workshop, hosted by Monash University and sponsored by Leonardo, is being held under the auspices of the Australian Meteorological and Oceanographic Society (AMOS) with support from the Bureau of Meteorology.

Weather radar is increasingly established as a major component of a heterogeneous network of ground-based and satellite-based instruments supporting a wide range of applications such as hydrology, aviation and emergency services. The workshop will continue to promote the links between research and operations, aimed at enhancing the quality of operational radar data and the scope of radar applications for research and user services.

The workshop will include panel sessions on

- Commercial software meets open source
- Weather radar networks and cyber security.

The two-day workshop will be preceded by a one-day training workshop on the Python ARM Radar Toolkit (Py-ART), organised by Scott Collis, Argonne National Laboratory. Please register for the workshop at <http://bit.ly/openradar2019> before 30 September.

### Dates

|                     |  |
|---------------------|--|
| 31 August 2019      | Submit half-page abstract for presentation |
| 31 August 2019      | Register for workshop                      |
| 30 September 2019   | Submit application for training workshop   |
| 12 November 2019    | Training workshop                          |
| 13-14 November 2019 | Radar workshop                             |
